

Skill Match – Resume Matcher and Skill Recommender

Team-B

GNANENDHIRAN V

Our journey began with the successful completion of Milestone 2, the Skill Matcher module. This foundational step enabled us to accurately align candidate capabilities with job requirements.

Skill MatcherCompleted

Already delivered: precise candidate-to-job skill alignment.

Focus:Skill

Recommendation
Our current mission: identifying and recommending crucial skill enhancements.

Skill Recommendation Module

This module is the heart of our system, meticulously analysing a candidate's existing skills against the demands of a target job role. It then intelligently pinpoints and recommends the specific skills that are currently missing.

Extract Candidate Skills
Leveraging advanced processing to identify skills from resumes.

Identify Job Skills
Parsing job descriptions for essential and desirable competencies.

Compare and Recommend
Gap analysis and suggestion of missing, critical skills.

Our system ensures candidates are aware of the precise skills needed to excel in their desired roles.

How Skill Recommendation Works

The Skill Recommendation module employs a sophisticated algorithm to ensure accurate and relevant suggestions.

Learning Path Integration

Beyond just recommending skills, our system goes a step further by integrating structured learning paths. For each suggested skill, the platform provides curated resources and developmental roadmaps.

Personalised Roadmaps

Tailored learning paths for each recommended skill, guiding users step-by-step.

Curated Resources

Access to relevant courses, articles, tutorials, and certifications.

Continuous Development

Fostering a culture of lifelong learning and skill acquisition.

Resume Uploading Phase

To facilitate the recommendation process, we have implemented a robust and intuitive resume uploading and processing mechanism. This feature is available for both HR professionals and individual candidates.

Resume Processing

Once a resume is uploaded, our sophisticated backend processes it with precision to extract all relevant skill data.

Stage 1:	Data Extraction: Identifying key textual elements related to skills and experiences. Skill Parsing: Categorising and standardising identified skills.
Stage 2:	Validation: Cross-referencing extracted skills against a comprehensive skill taxonomy.
Stage 3:	Database Integration: Storing processed skill data for further analysis.
Stage 4:	

Future Enhancements

We are committed to continuous improvement and have an exciting roadmap for evolving the Skill Recommendation Engine.

Enhanced UI/UX

Improving user interface and experience for more intuitive navigation and interaction.

Interactive Dashboards

Developing dynamic dashboards for visualising skill gaps and progression.

Advanced NLP

Integrating state-of-the-art Natural Language Processing Models for deeper skill understanding.

Predictive Skill Trends

Incorporating AI to predict future in-demand skills based on market analysis.
