Analysis Process

Skill Matching and Recommendation

Semantic Similarity Using Embeddings

- Uses Xenova/all-MiniLM-L6-v2 transformer model
- Converts skills into vector embeddings
- Calculates cosine similarity between skills

Skill Matching Strategy:

- Exact matches (skill = skill)
- Semantic matches (similar skill embeddings > 0.65 threshold)
- Prevents false positives and improves accuracy

Job Role Prediction System

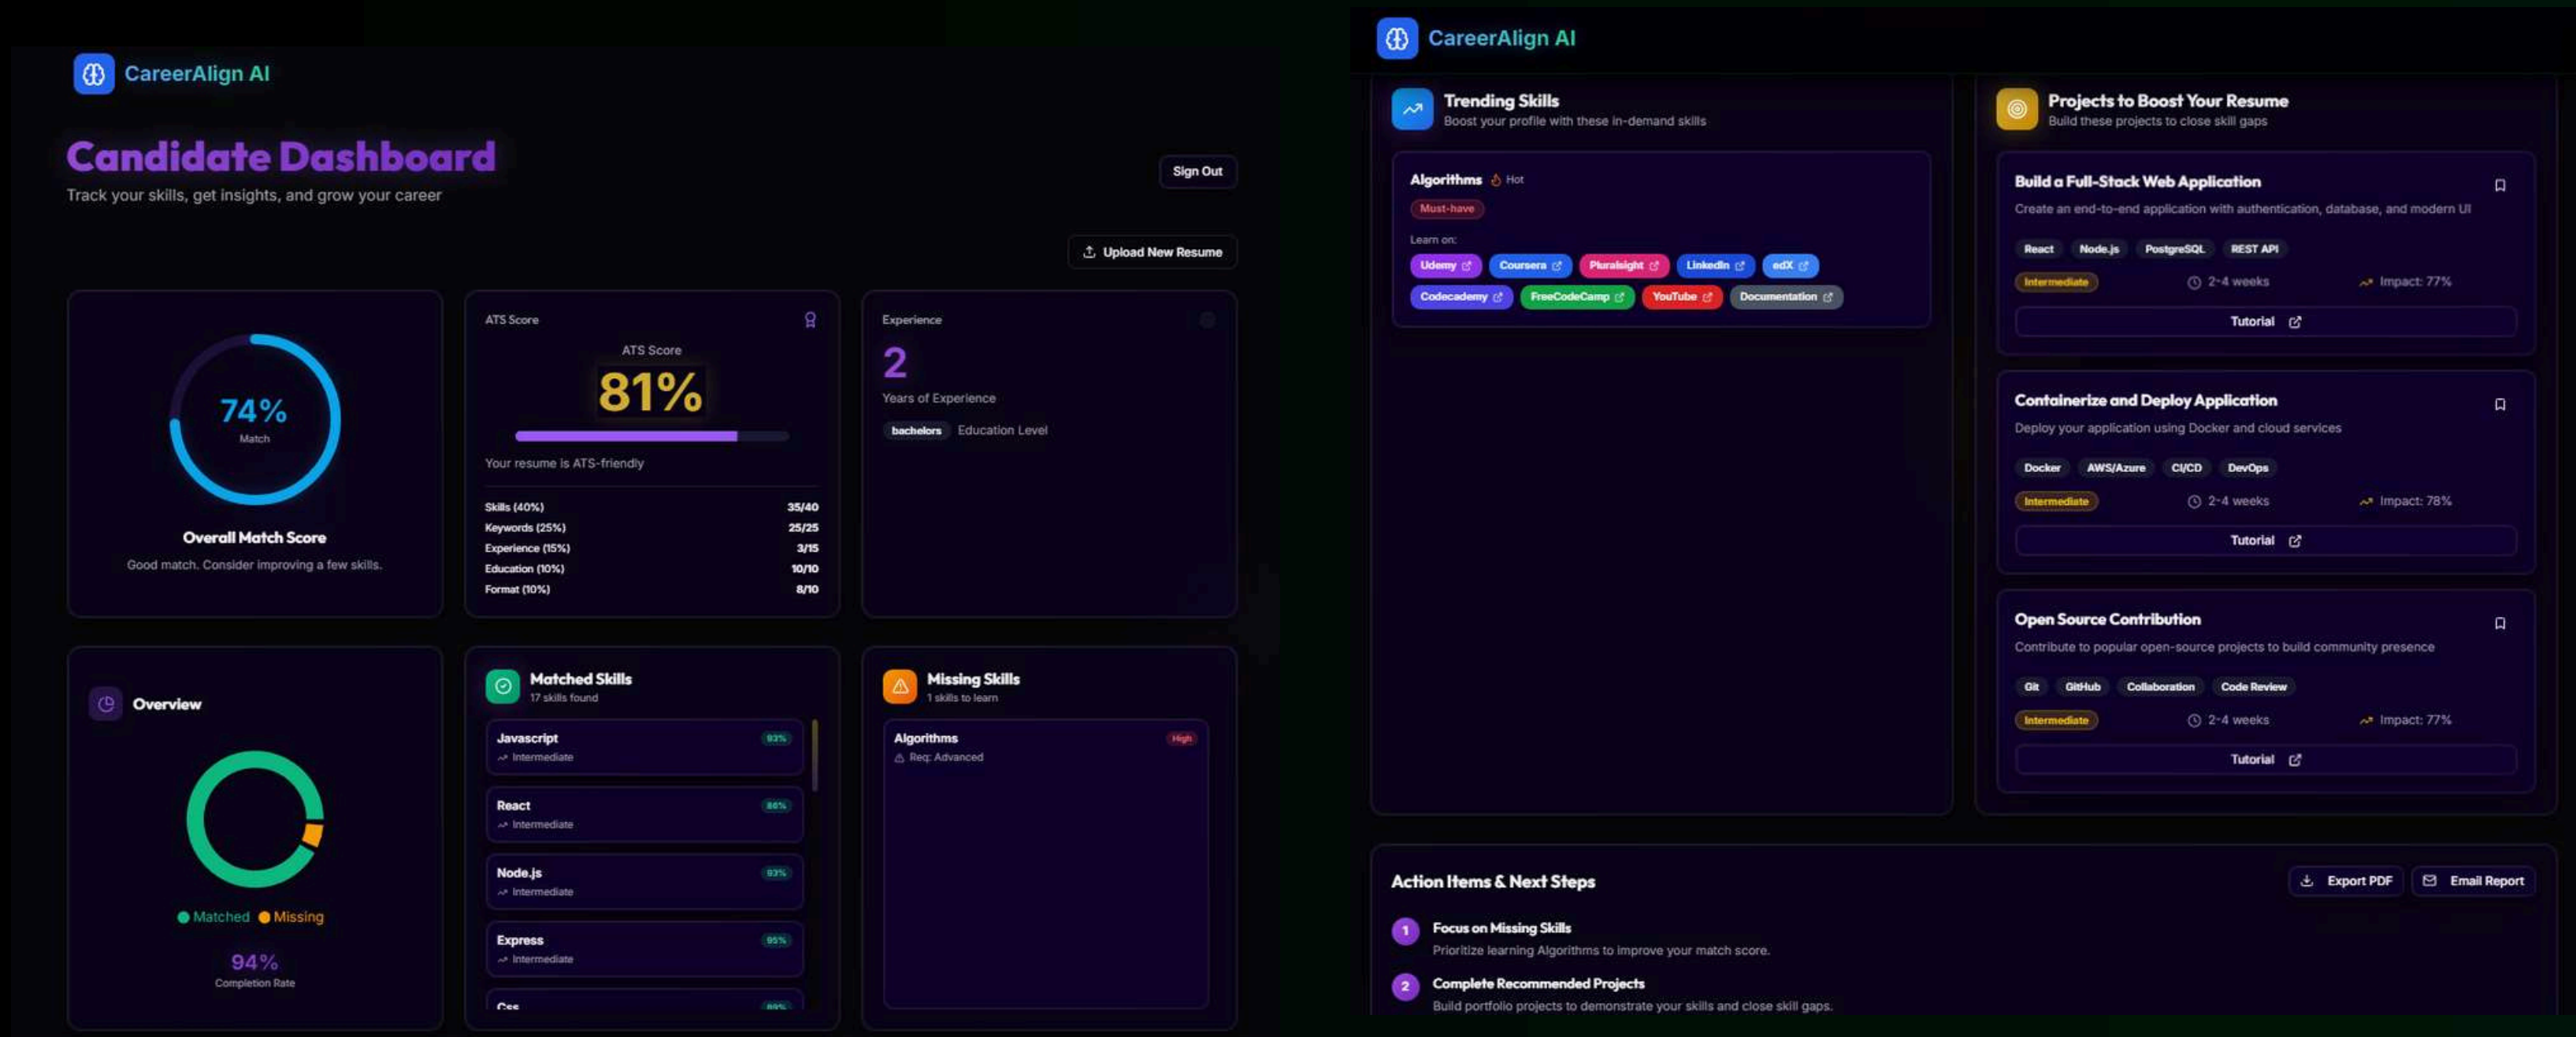

Automatic Role Suggestion based on extracted skills:

- Frontend Developer - React, Angular, Vue, HTML, CSS detected
- Backend Developer - Node.js, Python, Java, SQL, MongoDB detected
- Full Stack Developer - Both front & back-end skills present
- DevOps Engineer - AWS, Docker, Kubernetes, CI/CD tools found
- Data Scientist - Python, ML libraries, statistics detected
- And more roles based on skill combinations
